

ROLE OF FLOCKPOD IN ELEARNING

Interactive E-learning demands are moving beyond learning management systems to engage students in an active use of peer collaboration as a resource for their problem-based and collaborative activities. Current tools used to support e-learning include the following tools.

How many times do you go to a web page looking for some information, and find only a part of what you are looking for? Then you have to leave the site and rely on search tools or discussion groups to hopefully serve up some additional relevant material on the topic. On the other hand, if you are the content owner / writer, how often do you wish there was a way to gain insight into the users' thinking, their questions or even their knowledge of the topic?

The answer to both the questions is probably 'most often'. So then, wouldn't it be great if you had a tool that encouraged collaborative thinking, without having the learner leave the content page, and where they might just find all your answers?

The introduction of FlockPod brings social interaction much closer to the learner and makes it very easy for the content developer to build into the content framework.

FlockPod is about adding social interaction to any web page to serve a dual purpose - facilitate social learning and augment the content itself!
